“Quality First”

OUR WAY OF THINKING

Quality speaks its own language and has its own style. You know it instinctively; you can see it, hear it and feel it.

This is the feeling we are striving for when you experience our woodburning stoves and fires for the first time. We want you to appreciate the flames, the clean combustion, the thickness of the glass, the reassuring sound when you open and close the doors and above all, the stylish, ingenious design.

We believe that a stove must burn as efficiently as possible whilst ensuring the lowest possible CO2 emissions. They must be durable and solid, and have a functional and elegant design.

Taking this as our starting point, we have developed and manufactured stoves and fires for more than 35 years. And this is why they heat thousands of homes across Europe.

THE BENEFITS OF WOODBURNING

All Lotus stoves and fires are designed for woodburning only. Wood is an environmentally friendly fuel; when burnt, the carbon dioxide released into the atmosphere is approximately the same as that absorbed by the tree during growth. Wood is also a renewable resource, particularly when derived from plantations and cultivated woodland.

For optimum results, we recommend logs should be seasoned for 2 years or more to achieve a moisture content below 20%. This will not only give twice the output of freshly felled timber but will also help to avoid a build up of tar in your flue. Furthermore, if you can obtain hardwood logs this is better still, as they will have a greatly increased calorific value compared to softwoods.

KAARE SØLVSTEN // M.A.A, M.D.D, PAR

A Danish architect with a flair for designing woodburning stoves.

In 2001, Lotus started collaborating with architect and cabinetmaker Kaare Sølvsten. His passionate commitment and simple, stylish mode of expression has characterised the design aspect of the company in close collaboration with our engineers and manufacturers.

With a professional depth and competence both within the tradition of Danish craftsmanship and his training in architecture at the School of Arts and Crafts as well as the School of Architecture at the Danish Academy of Fine Arts in Copenhagen, Kaare Sølvsten's work has been awarded numerous prizes and he has gained recognition as one of the country's pre-eminent architects.

Kaare Sølvsten has a genuine love for craftsmanship and materials, and this shines through in the stoves he has designed for Lotus. He believes that quality is inextricably linked to the union of functionality, technology and design. He takes a holistic approach to his work, thinking in terms of the whole rather than a series of fragments put together. This is reflected in the Lotus design process, which endeavours to take all conditions and needs into account.

“Complete Peace of Mind...”

5 YEAR EXTENDED WARRANTY

When you choose a Lotus stove or fire, quality and technology are assured. Accordingly, your Lotus Expert Retailer will provide you with a Two Year Warranty for your new woodburning stove or fire.

This can then be extended to a Five Year Warranty provided your stove or fire is registered with Lotus. Please note, these warranties exclude certain consumable parts. Stoves or fires purchased outside of Lotus' Expert Retailer Network will carry a standard 12 Month Non-extendable Warranty. Full warranty terms & conditions are available to view at www.lotusfires.com.

EXPERT RETAILER NETWORK

We take great care to ensure that our stoves and fireplaces are designed, tested and manufactured to the highest possible quality and safety standards. We are just as concerned to make certain that they are sold and installed correctly so that you enjoy years of pleasure from your purchase.

Accordingly, you will find our products are only available from experienced, independent retailers who will be happy to show you a selection of models locally in their showrooms, often fully operational. These independent retailers will discuss your individual requirements both technical (such as sizing the heat output to your room and advising on your chimney system) and design, and ensure that you select the most appropriate product for your home. They will also be able to advise on or assist with the installation process as well as help provide any after-sales support and servicing of your appliance that you may require in the future.

Whilst we encourage our retailers to promote fireplace products and their outlets via the internet, we do not believe suitable levels of customer care and satisfaction can be obtained from nationwide online sales and we would strongly recommend that you consider this when undertaking your research and making a purchasing decision. Further, please be aware that we do not offer technical support (beyond our statutory responsibilities) to products bought via nationwide online sales, where this support would normally be offered by one of our qualified, independent retailers.

Furthermore, Lotus stoves and fires purchased from within our Expert Retailer Network will have the additional benefit of a greatly extended warranty period, subject to terms and conditions. Full details can be found at www.lotusfires.com.

“Lotus Comfort Eco Boost”

The innovative Comfort Eco Boost feature makes it even easier to light a Lotus stove, and is an optional extra available on the Sola, Liva, Mira and Prestige Integra models. When activated, a boost of air is supplied to the stove's firebox, speeding up the initial ignition as well as ensuring that newly added logs take even less time to catch fire. Featuring an integrated timer, the Comfort Eco Boost automatically closes the air supply after the preset period of time has passed, meaning that you can recline in comfort and relaxation after lighting or refuelling your Lotus stove.

- 1 Air is pulled through the vent below the stove and fed directly into the firebox through the Comfort Eco Boost function
- 2 A gentle pull of the automatic handle opens the Comfort Eco Boost to supply air for the preset period of time
- 3 The Comfort Eco Boost is powered by an easily changeable 9V battery which rarely requires replacing.
- 4 The easy to use timer control allows airflow to be preset to be provided for 1-7 minutes.

“Approved for Smoke Control Areas”

Most town and city homes in the UK are located in Smoke Control Areas as designated by the Clean Air Act 1993. To burn logs on a stove in these locations, the model installed must have been granted exemption from the regulations by the government through DEFRA.

This exemption is given only to appliances which have been independently tested to demonstrate particularly clean burning combustion. All Sola, Liva, Mira and Mondo stoves along with the H370 cassette fire are approved for use in Smoke Control Areas and this is shown on each product page. Your Lotus retailer can give you further help and advice.

“Lotus Liva”

A RANGE OF EXCEPTIONAL CHOICES

Liva stoves offer a broad range of styles and options, incorporating a number of innovative features such as a soft-close door mechanisms, a cool-to-touch door handle and easy to use air control. There is also the option of upgrading Liva stoves with Lotus's unique Comfort Eco Boost (see page 7) as well as the built-in option of an external air supply to minimise internal drafts.

Presenting a choice of high, medium and low height models to suit a range of interiors, the Liva stove collection even includes the wall mounted 8G for greater installation flexibility*. All Liva stoves are available with side windows for a panoramic flame view, with both 5 and 6 models also offered with steel sides. For ultimate versatility, the 7G can be rotated 180° thanks to its innovative pedestal base and flue connection which feature ball bearings for easy movement, allowing you to angle the stove to face different parts of the room.

“Lotus Mira”

REFINED DESIGN

The result of Danish technical expertise and innovation, Mira stoves provides a generous 5kW heat output at up to 78% efficiency. Displaying all of Lotus' hallmarks, these stylish stoves combine advanced combustion systems, user-friendly design and quality craftsmanship. For even greater convenience, Mira stoves can be upgraded with Lotus' Comfort Eco Boost (see page 7) which speeds up ignition and automatically reduces airflow once the fire is burning.

The Mira series includes models such as the 4, which features large side windows, as well as the 7 which has the option of Lotus' PowerStones upgrade for long lasting heat even after the fire has gone out.

“Lotus M2ST”

A DISTINCTIVE STOVE WITH EXTRAORDINARY HEATING POTENTIAL

The Lotus M2ST is a stove that is sure to add instant impact and make a real style statement in your home.

The M2ST is equipped with an innovative integral heat storage system that retains heat during burning and then releases it gently for up to 14 hours after the fire has gone out. It also features the ability to control the amount of heat output to the room and the heat to be stored.

The vertical steel panels offer a clean contemporary form and allow the heat to radiate out from the storage cells into the room. The striking black steel is accented by the elegant stainless steel control levers and handle, making the M2ST the perfect combination of form and function, and an ultra-stylish solution for ensuring your home is always cosy and warm.

“Lotus Living”

“We could have made a new stove, but instead we created something entirely different...”

Lotus Living – all the qualities of the woodburning stove now in an exquisite and luxurious design. Far from being merely a source of heat, this unique feature fire is a stylish mode of expression which sets a whole new standard for interior design. The Lotus Living is a free-standing fire with an elegant rounded form, exceptional flame picture and high efficiency heat output. The double-layered glass door ensures optimum insulation for better combustion in the firebox.

To extend your interior options, the Lotus Living can be installed with Stovax's various Stove Benches (see page 51 for more information) which create an exciting contrast to the stove's subtle curves.

“Fireplace inserts - a world of possibilities”

Combining outstanding combustion technology with a fantastic view of the flames, Lotus fireplace inserts are an ideal choice if you are looking for a stylish centrepiece and high performance heating.

Lotus fireplace inserts are constructed according to the finest principles of craftsmanship with an exclusive and thoroughly thought-out design and finish that is in a class of its own. The elegant control lever integrates beautifully so nothing interrupts the inserts clean lines; a true testament to Kaare Sølvesten, the architect behind their simple yet refined design.

There are several sizes in the range from the portrait H700 to the widescreen H570W, each offered to expand your styling options and to suit the heating requirements of your home. Further styling options are available with a choice of either steel or Black Magic door and frame options. There is even a double-side model that allows you to enjoy the exciting flame visuals from two rooms at once!

Each of the insert fires is compatible with the optional warm air ducting kit that can distribute some of the fires heat into other rooms to really maximise the heating benefits from this stunning fire range.

“Further Information”

PRODUCT IMPROVEMENT & WARRANTY

Lotus pursue a policy of constant product improvement. Products supplied may therefore differ in specification from those illustrated or described in this brochure, and you should always check the final specification with your Lotus retailer.

Your Lotus Expert Retailer will provide you with a Two Year Warranty for your new woodburning stove or fire. This can then be extended to a Five Year Warranty provided your stove is registered with Lotus within one month of the later of the purchase date or installation date. Accordingly, the start date for the warranty period is the date of purchase. During the registration process the Expert Retailer details will be required for your Extended Warranty to be activated. Please note, this warranty excludes certain consumable parts and is dependant on your appliance being serviced by an appropriately qualified person 12 months after installation and annually thereafter. Stoves purchased outside of Lotus' Expert Retailer Network will carry a standard 1 Year Warranty. Full details of this warranty is set out to view on our website at www.lotusfires.com.

CARE OF YOUR STOVE OR FIRE

To help you get the best performance from your stove or fireplace and keep it in good condition, Stovax (Lotus' distributor in the UK and Republic of Ireland) offers a wide range of cleaning and maintenance products. Stovax also supplies a wide variety of high quality fireplace accessories such as contemporary steel log holders. Your Lotus retailer will be able to give you full details or you can view the complete range at Stovax's website - www.stovax.com.

ENERGY EFFICIENCY

Lotus stoves and fires burn with high thermal efficiency. All models in the range are subject to European energy labelling standards and are rated as either A or A+ energy class appliances. For individual energy classes, see product pages.

IMPORTANT INFORMATION

Please note that the installations shown within this brochure may not conform to British and Irish building regulations. Please consult with a qualified professional installer (HETAS registered in the United Kingdom) for expert advice including the requirement for a hearth in your home.

We recommend that a HETAS approved installer should undertake a site survey prior to purchase and it is a requirement that any Lotus stove or fire should be installed by an appropriately qualified HETAS approved installer.

All fires and stoves consume air as they burn. To comply with Building Regulations (Document J) you may need to install a fixed air vent to ensure adequate ventilation. A room vent is not normally required when the air permeability is greater than 5.0m³/hr/m². Your Lotus retailer or HETAS installer will be able to advise on this. You can also download detailed installation instructions prior to purchase from www.lotusfires.com. Furthermore, by law all installations also require a Carbon Monoxide Monitor be present.

Please note that all parts of these stoves, particularly the glass panel in the door, become extremely hot during operation and can result in serious injury and burns if touched. It is therefore recommended that a fireguard complying with BS 8423:2002 is used in the presence of young children, the elderly or infirm.

STOVAX PROFESSIONAL XQ™ STOVE AND FIREPLACE CHIMNEY SYSTEMS

Lotus recommends the Stovax comprehensive range of stove and fireplace chimney systems, the Stovax Professional XQ™ collection.

Crafted from 304L grade stainless steel for a durable outer finish, the fully sealed components offer water tight protection for the insulation within.

With innovative decorative options, the ability to specify a colour for your system, and with a host of technical advancements such as its Twist-Lock system, the Stovax Professional XQ™ range provides an attractive, versatile and reliable solution for your flue system. Furthermore, the Stovax Professional XQ™ range carries a 10 Year Extended Warranty offering complete peace of mind.

For further information or to request a brochure, simply contact your local retailer or visit www.stovax.com.
